

Is Your Business Wasting Serious Cash?

Smart Energy Solutions from In2 Networks save up to 30% on heating and cooling costs.

Smart Energy for Businesses

Cost. Control. Comfort.

Rapid Payback, Long Term Savings. Setting the thermostat is simple, but keeping it where it needs to be is nearly impossible. With a solution from In2, your *desired* settings will be your *actual* settings, ensuring that your expected cost reductions become reality quickly . . . and stay that way.

Remote Command. Whether managing one facility or hundreds, In2's web portal allows you to log in and control any thermostat from anywhere, at anytime, with any internet-connected computer or Apple iPhone.

Simple Installation...Really! No software to install, no sitting on hold for hours with a help desk, and no complex manuals to "plan to read someday." Connect a few wires to your thermostat, connect the ICM to your network hub or router, and the ICM's imbedded self-configurator does the rest.

Flexibility at Your Fingertips. No matter how complex your organizational structure, the In2 web portal is easily configured to mirror your company's specific profile.

Trusted & Proven Partner. Internet Communication Modules (ICMs) from In2 operate hand-in-hand with thermostats from Honeywell - the proven leader in temperature control devices.

Your Staff, or Ours? You have total control. Either manage the devices yourself or have In2's Specialists watch and adjust your usage for you. No more "hoping" it happens. Either way, you know its being done, correctly.

Control COST . . . Maintain CONTROL . . . Enhance COMFORT
